## Increasing Access to Quality, Comprehensive Reproductive Health Care

Cardea delivers customized training through several formats, including eLearning, and we are pleased to share some of our recent products.

Cardea is using eLearning courses to support increased access to quality, comprehensive reproductive health care in hospital and primary care settings.

### ***Training and Policy Change to Support Postpartum Contraception***

Cardea is pleased to introduce an updated eLearning course to support hospital and prenatal care providers in building knowledge and skills to offer long acting reversible contraception (LARC) as part of a full range of contraceptive options for postpartum patients.

[Inserting LARC Immediately After Childbirth](#) addresses indications for insertion of all LARC devices immediately after following childbirth and includes a video demonstration showcasing correct postpartum insertion techniques for all FDA-approved IUDs.

Despite evidence of safety and efficacy, relatively few providers currently offer the option of LARC immediately after childbirth. Increasing access to LARC after childbirth requires both training and supportive policy. The American Congress of Obstetricians and Gynecologists (ACOG) offers [policy resources](#), including information on state Medicaid reimbursement for postpartum LARC.

### ***HPV Vaccination in Primary Care***

Cardea is pleased to offer an eLearning course designed to support primary care staff in communicating with children, adolescents and parents about the HPV vaccine.

[You Are the Key to HPV Cancer Prevention](#) offers up-to-date information on HPV infection and vaccine recommendations, along with evidence-based suggestions for successful HPV vaccine communication with patients and parents.

Please visit our website for other [eLearning](#) courses.
