

Our Mission-Improve organizations' abilities to deliver accessible, high quality, culturally proficient, and compassionate services to their clients.

How Can We Increase HPV Vaccination?

In *Accelerating HPV Vaccine Uptake: Urgency for Action to Prevent Cancer* (2014), the President's Cancer Panel describes the importance of increasing healthcare organizations' use of electronic health records (EHRs) and immunization information systems (IIS) to reduce missed opportunities for Human Papillomavirus (HPV) vaccination. To address this and other issues related to increasing HPV vaccination, the American Cancer Society (ACS), in partnership with the Centers for Disease Control and Prevention, convened the National HPV Vaccination Roundtable.

Cardea is working with ACS and the National HPV Vaccination Roundtable to better understand how EHRs/IIS are being used to support HPV vaccination in clinical settings, and opportunities for technological and systems improvements. Over the next few months, we will be conducting key informant interviews with medical practitioners, administrators, and technical staff across the country.
